

Position Statement for the JCP Executive Committee

Eclipse Foundation has been participating as a champion of open source on the JCP Executive Committee since 2007. As the home of the Eclipse Java IDE, Jakarta EE (formerly Java EE), MicroProfile, Adoptium, and the Eclipse Temurin Java SE runtime, the Eclipse Java Compiler, Eclipse Collections, and OpenJ9 we are very much committed to an open Java ecosystem.

Our primary contribution to the JCP EC has always been to represent the interests of the open source community, and for independent implementations of Java specifications. We also have a specification process that has been used successfully for Jakarta EE, MicroProfile, Eclipse Sparkplug, and AsciiDoc.

We would like to continue representing our communities and others with similar interests on the JCP EC and would appreciate your support.
